

Skills

Languages Bash, C#, C++, C, Elixir, Erlang, Haskell, JavaScript, Perl, Python, Rust, SQL, Scala, TeX
Technologies Linux, PostgreSQL, HTML, CSS, WebExtensions, X11, x86 ASM, IRC
Tools Vim, Git, GNU Make, GitHub Actions, Jenkins, QuickCheck, Docker, Ansible

Experience

Staff Software Engineer Moody's Analytics (London, UK) **04/2022–12/2025**

- Subject Matter Expert on Developer Experience (CI/CD, developer environments, git).
- Moved local dev env to GitHub Codespaces, enhancing collaboration and freeing local resources.
- Reduced dev env startup from over 1 hour to just 5 minutes, saving engineers 100+ hours monthly.
- Fixed docker-in-docker startup in the upstream devcontainers universal image.
- Pioneered good git practices across the company. Educated others about advanced git workflows.
- *Tech:* Rust, Python, C#, Docker, Kubernetes, CircleCI

sabbatical (Guildford, UK) **04/2020–03/2021**

- Joined the XMonad project as a core maintainer. Contributed fixes, features. Reviewed pull requests and helped 2 other people join the project. Directed a release. Launched crowdfunding.
- Implemented CI for taskwiki (taskwarrior integration for vimwiki) using Docker and GitHub Actions. Contributed a number of fixes and became a co-maintainer.
- Improved Language Server Protocol support (rename, code actions) in Async Lint Engine for Vim.
- Upped my Python skills, released strava-offline, strava-gear, arbt-chart, foursquare-swarm-ical.

Software Engineer Altworx (Brno, CZ) **04/2019–03/2020**

- Collaborated on a real-time event processing system with physical and cyber security applications.
- Prototyped a 100× faster storage engine for the reality network (time-travelling graph database).
- Discovered, investigated and fixed several fundamental issues in the event processing pipeline.
- Addressed technical debt using static analysis tools (linting, types) and a custom testing framework.
- *Tech:* Elixir, PostgreSQL, Kafka, Docker, Jenkins, BitBucket Pipelines

Principal Software Engineer GoodData (Brno, CZ) **08/2017–03/2019**

- Ran continuous integration and deployment infrastructure and build tooling for 100 engineers.
- Reviewed and merged hundreds of pull requests across multiple repositories.
- Sped up our JIRA deployment so much that I got Thank-you emails from the grumpiest engineers.
- Contributed patches to jenkins-job-builder and python-jenkins. Became a co-maintainer of both.
- Made builds of dozens of components more reproducible, secure and scalable using Docker.
- Set up a merge queue for the legacy monolith with 4-hour integration tests, saving its developers hours of wasted time every week.
- Built a tool for tracking individual test failures in JIRA, helping developers of shared codebases.
- *Tech:* Python, Perl, Bash, Jenkins, Zuul, Groovy, Java, Docker, Puppet, RPM

- | | | |
|---|---------------------|------------------------|
| Backend Software Engineer | SQLdep (Brno, CZ) | 05/2015–04/2016 |
| <ul style="list-style-type: none"> • Collaborated on a multi-dialect SQL parser and visual data flow (lineage) analyzer. • Administered the CI infrastructure and introduced continuous deployment for the backend. • Scaled the analyzer using parallel workers and a job queue. Set up logging and monitoring. • Prototyped on-premise deployment of the cloud-first product for customers in regulated industries. • Tackled tech debt: refactored the codebase into independent components, sped up tests and builds. • <i>Tech:</i> Scala, Perl, SQL, Jenkins, Ansible | | |
| Technical Co-founder | Briskat (Brno, CZ) | 04/2014–09/2014 |
| <ul style="list-style-type: none"> • Developed a prototype of a high-performance interactive database primarily for Online Analytical Processing, capable of processing millions of rows in milliseconds on commodity hardware. • Used caching and data compression (with some pre-/post-processing tricks to improve compression effectiveness) to reduce CPU work and improve memory bandwidth utilization. • Designed data structures and algorithms for efficient data storage, sorting, joining and querying. • <i>Tech:</i> Erlang, C, x86 ASM | | |
| Senior Software Engineer | GoodData (Brno, CZ) | 07/2011–04/2014 |
| <ul style="list-style-type: none"> • Developed a second-generation Extensible Analytics Engine (XAE), the core of GoodData platform. • Built an optimizing compiler from Multi-Dimension Analytical Query Language to SQL. • Tested the SQL backend against a reference implementation of the semantics using QuickCheck. • Set up regression testing infrastructure using both synthetic and production data. This ensured correctness, prevented performance regressions and allowed us to run performance experiments. • Pioneered CI (test results within a minute of git push) and CD (using Erlang hot code reloading). • Had my sleep interrupted due to production incidents less than 5 times: XAE uses small workers (microservices) with almost no moving parts, serving millions of reports daily. • Promoted to Senior Software Engineer after we fully migrated to the second generation XAE. • <i>Tech:</i> Perl, Erlang, Haskell, PostgreSQL, Jenkins, Puppet, Splunk | | |
| Software Engineer | Red Hat (Brno, CZ) | 12/2006–04/2008 |
| <ul style="list-style-type: none"> • Maintained RHEL and Fedora packages for Bash, Dovecot, Cyrus IMAP, BRLTTY. • Fixed Xorg freezing after 49.7 days (Windows 95, 98 famously had that issue a few years earlier). • Added the boot-based timer into the Linux kernel to fix uptime and process start times after sleep. • Fixed a hard to reproduce race in nss_ldap which led to users seeing another user's data (e-mails). • Promoted from Associate Software Engineer to Software Engineer within 6 months. • <i>Tech:</i> C, Bash, RPM, CVS, Git | | |
| Programmer | QNet CZ (Brno, CZ) | 11/2002–11/2006 |
| <ul style="list-style-type: none"> • Built an Internet Service Provider portal backend which configured iptables and traffic control (shaping) and showed live per-customer traffic statistics. • Implemented a flexible role-based access control framework for the frontend. • Shadowed the network administrator and technicians, later used the knowledge while volunteering for the CZFree.Net community network. • <i>Tech:</i> C++, PHP, Perl, iptables, Asterisk, CVS, Subversion | | |

Education

Computer Science

Masaryk University (Brno, CZ)

2006–2013

- Specialized in Parallel and Distributed Systems. Member of the ParaDiSe lab.
- Redesigned the e-learning software for typesetting exam test sheets: improved layout to avoid page/column breaks in multiple-choice; added support for advanced formatting, images and mathematical formulae. The system is still in use today. *Tech*: LaTeX, Haskell
- Typeset the Brisk Guide to Mathematics, a textbook for the undergraduate math curriculum.
- Teaching assistant for Introduction to Functional Programming; Automata and Grammars.

Scientific Computing

Universität Wien (Vienna, AT)

2010

Personal

Technical blog. Popular articles: [Side by side git-range-diff](#); [Linux, media keys and multiple players](#); [Even faster bash startup](#)

Free and open-source software. Contributed hundreds of patches, released dozens of small projects, joined several mid-sized projects as a (co-)maintainer.

- Maintainer of the XMonad X11 window manager. Ex-commmitter to the Fluxbox WM.
- Prototyped Linux support for external monitors on dual-GPU laptops (Nvidia Optimus).

Cycling. Won 3 alleycat races (and a few more podium finishes). Built several cycling-related tools:

- [strava-map-switcher](#) is a browser extension for Strava with over 4000 users adding better maps.
- [strava-offline](#) keeps a local mirror (backup) of Strava activities for further analysis.
- [strava-gear](#) is a rule-based tracker of gear and component wear.
- [locus-rflkt-addon](#) connects Locus Map (Android app) with Wahoo RLKFT (cycling computer).

Inline speed skating.

- Focus on ultra-endurance events: 🏆 British 6Hours Endurance Challenge, 24h Rollers du Mans.
- Volunteering as a marshal of the London Friday Night Skate and LondonSkate since 2025.
